## FINANCIAL STATEMENT TRANSLATION

### Define

default values, selection options, and control information, including the default balance sheet and rate types.

### Translate

and consolidate month-end financial data more powerfully by automatically performing routine tasks.

### Take control of your finances

Define default values, selection options, and control information, including the default balance sheet and rate types used to automatically calculate monthly translation gain or loss. Other options control the level of detail posted to Microsoft Solomon General Ledger and the number of periods for which the worksheets should be maintained.

### Translate currency efficiently

Translate and consolidate month-end financial data more powerfully by performing routine tasks automatically. Microsoft Solomon Financial Statement Translation can automate the calculation of translation/re-measurement of gains and losses, historical exchange rates, multi-tiered translations, and multi-level consolidations.

### Master complex information

Perform in-depth translation definition and worksheet inquiries using a variety of screens and reports, in addition to any of the Microsoft Solomon General Ledger inquiry screens, to see how currency translation affects your business. A variety of extended reporting options can be used, including the ability to sort and select on any field in a report.

### System-wide integration

Create an adjusted set of books in your local currency to conform to Generally Accepted Accounting Principles (GAAP) requirements, and then translate your statements to your parent company's reporting currency for consolidation, comparison, and roll-up financial reporting.

## FINANCIAL STATEMENT TRANSLATION

### FEATURES AND FUNCTIONALITY

<b>Dependable Controls</b>	Maintain a complete audit trail of the translation process. Specify criteria to control report content and focus on the information you require.
<b>Adaptable Setup</b>	Define the currencies, rate types, exchange rates, and translation gain and loss accounts used in the translation process.
<b>Central Repository</b>	Maintain all currency and exchange rate data in a single location for accuracy and reliability.
<b>Financial Application Data Sharing</b>	Create an adjusted set of books in your local currency to conform to GAAP requirements. Translate statements to a parent company's reporting currency and then transfer statements to your parent company for consolidation, comparison, and financial reporting.
<b>Standards Compliance</b>	Produce statements to comply with the Financial Accounting Standards Board (FASB) Statement 52, Foreign Currency Translation, and with the International Accounting Standards Board (IASB) Statement 125.
<b>Corporate Reporting</b>	Translate books into other currencies for corporate reporting. Perform an unlimited number of translations and re-measurement at a single installation.
<b>Flexible Rules Definition</b>	Define financial statement translation rules and exchange rates used to create the Reporting Currency set of books from the Local Currency set of books.
<b>Flexible Location</b>	Perform month-end financial statement translation in either the actual subsidiary or in a central location.
<b>Fast and Accurate Computation</b>	Automatically compute the translation gain or loss amount and report it to the Reporting Currency set of books.
<b>Streamlined Calculation</b>	Automatically calculate historical rates for inventory and cost of goods sold with the Bi-monetary Inventory processing feature, which eliminates the need to maintain these historical exchange rates manually.
<b>Multi-tiered Translation</b>	Re-measure a Local Currency set of books and consolidate different currencies at different rates—and then to any number of Reporting Currencies. If you are a business entity that owns entities and operates in various currencies, take advantage of multi-level consolidations.
